Mid Semester Examination

April 2025

Max. Marks : 30 **Duration: 60 Minutes**
Class : TE CSE/EXTC **Semester: VI**
Course Code : OEIT2 **Branch : CSE/EXTC**
Name of the Course: Software Engineering

Instructions:
(1) All Questions are Compulsory
(2) Draw neat diagrams

Question No.		Max. Marks	CO
Q1)	a) Choose the correct option: i) Agile model advocates which of the following approaches? a. In each increment, get something "quick and dirty" delivered, which may or may not add much value to the customer b. In each increment, get something simple and minimal released, but as quickly as possible c. In each increment, get something of business-value delivered, consistent with the right level of quality d. In each increment, get something delivered once it has been fully documented and the documentation has been signed off as complete e. In each increment, complete and deliver the working software for one use case ii) Members of a Scrum team are usually expected to answer which of the following questions during a daily Scrum meeting? a. What did you do yesterday b. What will you do today? c. What obstacles are in your way?	5 + 5	CO1

	d. Why are you getting delayed? e. Why your program is having too many bugs? iii) The starting point for development of an MIS is; A. identification of business processes that are the essence of the business B. a distributed database management C. the system has a large number of PCs and a LAN. D. purchase of a mini computers iv) Which of the following symbols is (are) not there in Data Flow Diagram (DFD): A. a square B. an open rectangle C. a circle D. a triangle v) Selection of a process model is based on a) Requirements b) Development team and users c) Project type and associated risk d) All the above		
	b) Why use an SRS document? Identify the contents in following section of SRS for a Plagiarism Checker software. Functional requirements Non Functional requirements		CO2

Q2)	Netflix is a streaming service for movies and TV shows to personal computers and TVs. Anyone can browse the Netflix library (by title, actor, director, genre), but one must have a subscription to be able to stream videos. A user can activate (i.e., create), suspend, or cancel their membership. An account is active as long as it has not been suspended (and not re-activated) or cancelled. The subscription fee is Rs500 per month, charged on the monthly anniversary of the day that the subscription was activated. If a user has an active subscription and accesses the Web site from within India, then the user can stream as many videos (from the Netflix library) as he or she wants, whenever he or she wants. A user can pause, rewind, fastforward or stop a stream as often as they like **Create a use-case diagram** for the service. Provide short 1 sentence description of each use-case. **Create a tabular use-case description** for the main scenario, two alternative scenarios, and one exceptional scenario associated with streaming a video. The main scenario is triggered by the user selecting a particular video. The user can switch among viewing (at normal speed), pausing, rewinding, or fast-forwarding at any time, and as often as they like. Stopping a stream ends the use case, as does losing internet service (if the user wants to watch the rest of the video, the user would have to initiate the streaming use case again and resume viewing).	5+5	CO3
Q3)	**Draw Class diagram** for following scenario. A teacher teaches 1 to 3 courses. Each course is taught by only one teacher. A student can take between 1 to 5 courses. A course can have 10 to 300 students. Identify the associations and multiplicity. **With an example**, differentiate between composition and association.	5+5	CO3
